

HIPTEN 21018 A6

DESCRIPTION:

HIPTEN[®] 21018 A6 is low density polyethylene resin developed for production of thin blown film.

HIPTEN[®] 21018 A6 has extraordinary optical properties and very good mechanical properties, good processability and heat sealability.

The addition of slip and antiblock agents results in good sliding and antiblocking properties of produced film.

STORAGE:

Polymer pellets are packed in LDPE bags, each bag weighs 25 kg. Bags are arranged on pallets and wrapped in stretch foil. One pallet has total polymer weight of 1250 kg.

Polyethylene is combustible material, therefore fire prevention measures in warehouses should be applied. Keep the polymer protected from harmful influences of heat, direct sunlight and high atmospheric humidity during storage.

If resin is stored under unfavourable conditions of large fluctuation in ambient temperature and atmospheric humidity, atmospheric moisture can condense inside the packaging. In such case, it is recommended to dry pellets before use.

The producer has no responsibility for any damage caused with the inappropriate storage.
